

OFFICIAL USER GUIDE

THUNDER ROULETTE

War Thunder Session Director

VERSION 1.4

Profiles. Roulette decks. Live challenge tracking. BR and weapon progression.

Built for squads that enjoy questionable decisions.

Quick Start

Use Thunder Roulette as a simple randomizer or as a persistent campaign manager. Use only the features your group wants.

1. Choose a profile

Profiles keep separate queues, settings, campaign progress, and history.

2. Roll what you need

Roll Nation, BR, Challenge, or Fun Mode separately - or use ROLL SESSION.

3. Start a challenge

START SESSION opens detailed trackers or simple outcome buttons, depending on the challenge.

4. Resolve attempts

Success applies the reward. Failed applies the configured punishment. Each attempt is saved.

5. End and review

End session writes the complete run under Manage > History.

Quick roulette vs campaign play

Quick roulette: use individual roll buttons and ignore tracking. Campaign play: draw a challenge, track attempts live, and advance BR or a weapon stage.

Main Window and Manage

Profile and Manage

Switch profiles. Manage contains profile settings, session modules, progression, history, challenges, and fun modes.

Reset all

Clears current roulette displays and queues. It preserves profiles, custom content, history, and campaign progress.

Nation and BR

Nation and BR use persistent shuffled sequences without repeats until each valid range is exhausted.

Decks

Challenges define tracked objectives, rewards, and failure punishments. Fun modes add lineup constraints.

ROLL SESSION

Runs whichever modules are enabled under Manage > Roll Session.

START SESSION

Available after a challenge is drawn; opens the live tracker.

Manage tabs

Profiles: BR limits and current campaign. Roll Session: module selection. Progression: exact/range stages. History: completed runs and notes. Challenges: structured tracker editor. Fun Modes: custom lineup rules.

Challenges and Progression

CHALLENGE

Name

Caliber Climb

Objective

Spawn vehicles from your lowest gun caliber to your highest.

SESSION TRACKING

The session window is generated from these counters and checkboxes.

Recording mode

Detailed uses counters and checkboxes. Simple enables Success and Failed immediately and records only the outcome.

Rewards and punishment

Success can advance BR or weapon stage. Failure can stay put or drop one BR/weapon stage, clamped at the minimum.

Weapon campaign catalog

Air: 22 gun, 42 rocket, 58 missile stages. Ground: 56 gun, 10 rocket, 34 missile stages. Naval: 64 gun, 8 rocket, 9 missile stages.

Stages may be exact diameters or user-defined ranges. Disabled stages are skipped. Current track and stage are stored per profile. Source snapshot: War Thunder datamine 2.57.1.68, commit 31dce3c02c723c4390e69af66a476f5d32642bb4.

Live Session Window

Detailed mode unlocks Success after required trackers are complete. Simple mode keeps both outcome buttons ready.

Success

Captures and clears the note, applies the reward, resets trackers, and keeps the session open.

Failed

Captures and clears the note, applies the configured stay/drop punishment, resets trackers, and continues.

End session

Closes the window and writes one history entry for the complete run.

Session History

SESSION HISTORY

3 recorded sessions

2026-08-05 20:31 | Completed (3 successes) | Caliber Climb | 5.56 mm -> 7.5 mm | 18:42

Nation: Sweden Stage: 5.56 mm -> 7.5 mm

#3 Success | Assists: 6 / 3 | Stage 7.5 mm -> 7.62 mm

2026-08-05 19:44 | Completed (1 success, 1 failure) | Three Roles | 12:08

Nation: France BR: 2.3 -> 2.7

#2 Failed | Vehicle classes: 2 / 3 | Notes: missed the aircraft role

2026-08-05 18:12 | Abandoned | Zone Keeper | 04:15

Nation: Japan BR: 4.0 -> 4.0

History is stored per profile after End session or closing the session window.

Recorded data

Each attempt stores its outcome, actual tracker values (including over-target counts), notes, and BR or stage movement.

Simple or detailed

Detailed history shows counter and checkbox snapshots. Simple history records the outcome, note, and progression only.

Early v1.4 nested history files are normalized automatically when History is opened. Clear profile history permanently removes the displayed records.

Reset, Safety, and Troubleshooting

Reset behavior

New sequence resets only nations. Reset deck clears that queue and current card. Reset all clears current roulette state while preserving long-term data.

Data location

Runtime data lives under Thunder-Roulette/Data. Back up this folder before manual editing, moving computers, or testing development builds.

Unsigned executable

Windows may warn about the community EXE because it is not code-signed. Verify that it came from the official project release.

App does not launch

Run Thunder-Roulette.ps1 from PowerShell so the error remains visible.

Start Session is disabled

Draw or restore a challenge. The selected challenge is profile-specific.

A reset looks unchanged

Close/reopen Manage, then draw again from the freshly cleared deck.

History looks stale

End the active session, reopen History, and allow the normalizer to run.

A campaign will not advance

Confirm the challenge reward is Weapon Track or BR advancement as intended.

Reference Card

Roll up!

Draw next non-repeating nation.

New sequence

Clear only the nation queue.

Roll BR

Draw next non-repeating BR within profile limits.

Draw challenge

Draw and persist active challenge.

Draw mode

Draw next non-repeating fun mode.

ROLL SESSION

Roll enabled modules together.

START SESSION

Open current challenge tracker.

Success

Capture note, apply reward, reset attempt.

Failed

Capture note, apply punishment, reset attempt.

End session

Close and save complete run.

Reset all

Clear current state; preserve long-term data.

ROLL RESPONSIBLY. EMBRACE QUESTIONABLE LINEUPS.

This tool does not interact with or modify the War Thunder client.
